

Cristian Burgoin

Software Engineer | Backend · Mobile · Applied AI

Mexico | +52 (612) 199-4417 | cristian.burgoin.dev@gmail.com | cristianburgoin.dev | LinkedIn

PROFILE

Software Engineer with experience building backend systems, Android applications, and applied AI solutions across academic research and real-world collaborative projects. Passionate about designing maintainable software, clean architectures, and scalable systems. Comfortable working across the software lifecycle—from requirements analysis and database design to implementation and deployment—and eager to contribute to software products used by real users.

EXPERIENCE

Research Software Developer, LIDIAIR – UABCS AI & Robotics Lab | La Paz, México Aug 2025 – Present

- Designed and developed a real-time fruit detection and classification desktop app (TensorFlow, Keras, OpenCV) integrated with serial weight sensors to automate price calculation and shopping cart generation.
- Developed a real-time facial emotion recognition system (DeepFace, OpenCV) with live performance metrics, multi-detector comparison, and Excel export for research evaluation.
- Successfully presented both systems at an institutional software exhibition as part of the LIDIAIR research group.

PROJECTS

Lost & Found UABCS May 2026 – Jun 2026

Kotlin · Jetpack Compose · Retrofit · Laravel · AWS S3

- Developed an Android application for reporting and recovering lost items across a university campus, integrating a Laravel REST API and AWS S3 image storage via Retrofit.
- Implemented a configurable mock-data fallback so the app stays fully navigable when the backend is unavailable — deliberate engineering decision to handle real-world infrastructure constraints.
- Collaborated in a four-person development team responsible for requirements analysis, database design, and technical documentation.

Turismo La Paz Apr 2026 – May 2026

React Native · TypeScript · Expo · Geolocation

- Developed a React Native mobile application centralizing more than 40 tourist attractions through geolocation, distance-based recommendations, and category filtering.
- Officially presented to La Paz City Hall and the Municipal Tourism Department as part of an academic collaboration.

Hotel Reservation System Oct 2025 – Nov 2025

Java · MySQL · REST API · JWT

- Designed and developed a modular REST API for hotel reservation management using Java and MySQL following a Controller–Service–DAO architecture.
- Implemented JWT authentication, BCrypt password hashing, role-based authorization, reservation validation, and business rules.

TECHNICAL SKILLS

Languages: Java (Advanced), Python (Advanced), Kotlin (Intermediate), TypeScript (Intermediate), JavaScript (Intermediate)

Frameworks: React Native, Jetpack Compose, React, Node.js / Express, Expo

Databases: MySQL (Advanced), PostgreSQL (Intermediate), MongoDB (Intermediate)

Applied AI: OpenCV, TensorFlow, Keras, DeepFace

Tools & Platforms: AWS S3, Git, GitHub, Postman, Linux, REST APIs

EDUCATION

Bachelor's in Software Development Engineering, UABCS | La Paz, México Aug 2023 – Present

- GPA: 99/100 · Academic Excellence Distinctions (1st & 2nd place rankings).
- Relevant Coursework: Software Architecture, Data Structures, Relational Database Design, REST APIs, Mobile Development.

SPOKEN LANGUAGES

English: Fluent (B2) | **Spanish:** Native
